

Operations

To support our five-year direction, MoDOT reviewed five major areas of work to determine ways to increase efficiency and save money: winter operations, signing, striping, mowing and pavement maintenance. Savings in these areas will be redirected to provide more improvements to the pavement conditions.

Winter Operations Key Focus

- Plow snow and treat roads to make the roads safe and passable
- Prioritize roads by type and regional significance
- Have an efficient plan of attack for each storm type
- Be consistent across the state

Major Roads Plowed Mostly Clear

- Crews will provide continuous operations to major roads and roads of regional significance until conditions are mostly clear.
- Overnight, emergency crews will monitor for slick spots.
- The following day in normal business hours, crews will work on road conditions on these roads and lower priority roads.

Mostly Clear Condition

Low Volume Roads (<2,500 daily traffic)

- Loose snow will be plowed to two-way passable traffic.
- Hills, curves and intersections will be treated

Low Volume Road Plowed for Two-Way Traffic
