616.8.17M (TA-17M) Mobile Operation on a Two-Lane Highway

- Always use vehicle mounted advance warning sign on the protective vehicle.

- Always use a protective vehicle. If available, use a truck/trailer mounted attenuator (TMA).
  1. Activate high intensity rotating, flashing, oscillating, or strobe lights.
  2. Position the protective vehicle/TMA a minimum of 150 feet in advance of the work space, if possible.
  3. If the protective vehicle is equipped with a TMA, place a static sign under the flashing arrow panel.
  4. If used, operate the flashing arrow panel in the four-corner or alternating diamond caution mode.
  5. Set vehicle mounted sign at a recommended height of 48 inches above the road.

- Use this typical application for the placement/removal of advance warning signs, and debris/animal removal on two-lane highways.
  1. For other operations that require workers on foot, refer to the proper lane closure typical application.
