616.8.44A (TA-44A) Entrance Ramp Closure

- **This typical application applies** for work occurring in the acceleration lane and or the lane next to the acceleration lane for one mile past the acceleration lane.

- **Always use advance warning signs and channelizers:**
  1. Use EPG 616.33SD (TA-33SD) Short Duration Lane Closure on a Multi-Lane Highway for setting advanced warning signs and channelizers.
  2. Reduce channelizer spacing to no more than thirty feet at the beginning of the deceleration lane to past the gore point.

- **Always use a protective vehicle with a flashing arrow panel (FAP) and a truck/trailer mounted attenuator (TMA).**
  1. Activate high intensity rotating, flashing, oscillating, or strobe lights.
  2. Position the protective vehicle/TMA a minimum of 150 feet in advance of the work space, if possible.
  3. Operate the FAP in the four-corner or alternating diamond caution mode.

- **For roadways posted at 45 mph or below, shoulder advance warning and protective vehicles are required, use a TMA if available:**
  1. Activate high intensity rotating, flashing, oscillating, or strobe lights.
  2. Position the protective vehicle at least 150 feet behind the work space, if possible.
  3. Equip the TMA with a FAP set in the four-corner or alternating diamond caution mode or a CMS with the appropriate lane closure message, and an appropriate lane closure sign.
  4. Equip the advance warning vehicle with a FAP set in the four-corner or alternating diamond caution mode or a CMS with the appropriate lane closure message, and an appropriate lane closure sign.

- **Notes:**
  1. Where inadequate acceleration distance exists for the temporary entrance, the YIELD sign may be replaced with STOP signs (one on each side of the approach).
  2. When used, the YIELD or STOP sign should be located so the ramp traffic has adequate sight distance to merge into mainline traffic. If insufficient gaps are available consideration should be given to closing the ramp.
